TEMBEEK
SYSTEMS

UNITED STATES - REMOTE

Backend depth for systems that must hold up.

Hands-on API, integration, workflow automation and modernization delivery for lean U.S. product and operations teams.

THE OUTCOME

Fix the expensive constraint first.

Tembeek scopes bounded engineering outcomes, works through visible milestones, and leaves tested behavior, documentation and maintainable ownership.

01

Backend APIs

Clear contracts, validation, error handling, testing and documentation.

02

System integrations

Dependable data movement, retries, reconciliation and ownership.

03

Workflow automation

Replace costly repetitive handoffs with visible controlled processes.

04

Modernization

Assess risk and move one capability through a staged transition.

TYPICAL SCOPE

- Technical assessment
- Fixed-scope project
- Focused delivery sprint
- Ongoing advisory

GOOD FIT WHEN

- A critical integration is fragile
- A backend capability needs senior delivery
- Manual operations are creating cost
- A rewrite decision needs evidence first

NEXT STEP
